

**ROUNDS 3 & 4, Saturday, July 25th & Sun., July 26 at 8 AM (Weather permitting)**

## **VOLUNTEERS NEEDED!**

Thanks to our great volunteers, 2 successful suction harvesting efforts have been completed. BUT there is much milfoil still to be captured. **NEEDED ARE:**

- **DIVERS:** to do the underwater work
- **BOATERS/KAYAKERS:** to help scoop up stray pieces of milfoil, using a small net or similar "catching" device; & to keep boats from approaching where diver is located
- **WORKERS ON THE HARVESTER:** to move the retrieved milfoil into bags for transportation to shore

Suction Harvesting will be in **MORIN'S COVE**; helpers should meet there or let us know if you need transportation to that area. Two suction harvesters will be in operation so lots of volunteers are needed.

\*\*\*\*\*

SEND your **name, contact information (including phone #), what job you can do, and what date(s) you are available to:**

Aaron ([plumsupply@aol.com](mailto:plumsupply@aol.com)) or Art ([artsearle@gmail.com](mailto:artsearle@gmail.com))

*If you are a diver or harvester worker and need transportation to the site, please convey this in your reply; transportation will be provided.*

The alternative to suction harvesting is application of herbicides. Your help is needed to avoid that least preferred method. We had a great turnout last weekend but continue to need more people helping out to make suction harvesting this year's solution re: problematic milfoil.

**If you are able, please step up and do your part.**
